

FACILITY DESIGN

Warehouse Services Inc. Engineering is a full service, multi-disciplinary, customer oriented engineering and surveying firm specializing in private development and public infrastructure.

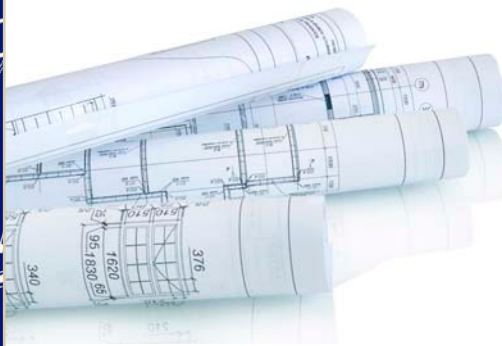

From conceptual site design to project completion, we are dedicated to providing high quality and timely solutions fitting our client's needs. Warehouse Services Inc. offers a wealth of experience and can provide you with a full range of infrastructure solutions that will add value to your project.

We use the most current software available in the industry including AutoCAD Civil 3D, AutoTURN, hydraulic/hydrology programs and survey GPS systems.

Our Engineering professionals will meet with local officials to determine their approval processes, required submittal documents, and filing schedules. We will then prepare a realistic design schedule outlining the timing from the commencement of survey field work to the date the contractor can put a shovel in the ground.

CIVIL ENGINEERING & SITE DEVELOPMENT:

- Infrastructure Assessments
- Zoning and Regulatory Assessments
- Drainage Analysis
- Conceptual Site Planning
- Colored Renderings
- Construction Cost Estimates
- Permit Coordination
